## PIG - PREVENTATIVE HEALTH CARE RECOMMENDATIONS

Dr. Bob Rednour  
Dr. Michelle Bouchey  
895 Hicks Rd.  
Youngsville, NC 27596

### *Vaccinations*

- Weaning-aged Pigs (8 weeks): Parapleuro Shield P & Covexin 8. Booster in 4 weeks.
- Adult Pigs: Parapleuro Shield P & Covexin 8 once yearly
- Sows Prior to Farrowing: Parapleuro Shield P & Covexin 8

\*\*\*There are other risk based vaccines (ie. Rabies vaccine) that the veterinarians may recommend based on your individual pig's risk level.

### *Deworming*

- Deworm twice yearly
  - Alternate between Ivomec injectable and Panacur oral suspension
  - Outdoor Pigs: Ideally given in Spring & Fall
  - Indoor Pigs: Time of year is irrelevant
- Fecal exams are recommended twice yearly to determine efficacy of protocol and adjust treatment according to results.
- Sows Prior to Farrowing: Deworm with Ivomec injectable

### *Other*

- Nutrition should be based on your individual pig's breed and life stage. Please discuss any nutrition-related concerns with our veterinarians.
